

# SOLUTION BRIEF

# Legal Services

*From trade secrets to client information, you have an ethical and legal obligation to protect your firm's privileged data.*

## WHY ARE LAW FIRMS A GROWING TARGET?

### Limited IT Resources

Cyber-attackers know that many law firms have to financially source and staff a 24x7 Security Operations Center (SOC).

### Valuable Client Data

Cyber-attackers will commonly target an organization's outside counsel to gain access to their clients' confidential data.

### Automated Defences

Many law firms rely on automated security technologies, which cyberattackers have been known to skillfully elude.

### Clients are your new regulators

Law firms are responsible for safeguarding high-priority and confidential data across many different industries. As a result, clients expect that firms are able to meet their compliance, governance and due diligence requirements. We understand the unique regulatory pressures your clients face and we'll work with you to put the appropriate security practices and policies in place.

### Rest assured, your privileged data is safe

We don't sleep so you can. Our 24x7 SOC constantly monitors your network, hunting for threats that may compromise your network. Our elite team of security analysts uses sophisticated forensic tools to investigate and respond to suspicious behavior and lock it down within seconds.

### Leverage a virtual team of experts

From forming a team with the appropriate skill sets to budgeting for 24x7 support, building your own SOC isn't always feasible. Our team acts as an extension of yours, constantly monitoring, detecting and containing threats so you can focus on your business instead of managing cybersecurity.

### Stay out of the headlines

A cyber breach can cost a lot more than business disruptions or compromised confidential information. The reputational damage caused by a breach can impact your business long after the breach is resolved. With robust threat detection capabilities, industry best threat intelligence and powerful forensic investigation tools, our skilled security analysts protect your network and reputation at all times.

### See what you're missing

Traditional security technologies often fail because they can't detect never-before-seen attacks. We leverage complex signatures and rules to automatically block known threats in real-time, but we also use behavioral-based anomaly detection, log correlation and full-packet capture to confirm unknown threats.

## Managed Detection and Response for Law Firms

The legal industry is steadily becoming a prime target for cyber attackers. You need a solution that evolves at the pace of today's sophisticated cyber-attacks.

eSentire Managed Detection and Response™ (MDR) keeps your firm safe from constantly evolving cyber-attacks that technology alone cannot prevent. Our 24x7 Security Operations Center staffed by elite security analysts, hunts, investigates and responds to known and unknown threats in real-time, before they become business-disrupting events.

## At eSentire, we work with many legal clients- ranging from small firms to the AM100 - who all benefit from:

- ✓ Enterprise-class detection and response leveraging proprietary technology and advanced forensic tools
- ✓ A 24x7x365 Security Operations Center (SOC) staffed with elite security analysts
- ✓ Response and resolution of cyberthreats in near real-time
- ✓ Ongoing access to cybersecurity experts and advisors
- ✓ White-glove customer service resulting in a 97% customer retention rate

**Our core value is simple:  
A customer's network can never be compromised.**

## We can help you navigate the complexities of cybersecurity.
