# Mapping the CyberSecurity Toolkit to eSentire MDR Services

The eSentire and National Association of Manufacturers Cybersecurity Toolkit draws upon proven frameworks to demonstrate how manufacturing organizations of all sizes can overcome cybersecurity challenges including:

- Improving visibility into IT and OT assets
- Identifying and disrupting zero-day threats before they impact the supply chain
- Proactive incident preparedness and 24/7 threat monitoring
- Regular security assessments and testing to drive continuous improvement

As the Authority in Managed Detection and Response, eSentire offers a comprehensive suite of cybersecurity services to ensure your cyber resiliency aligns with the NAM Cybersecurity Framework. The following is a summary of how eSentire's three service portfolios map to the nine key components of the framework.

| | Managed Risk Programs<br>• Vulnerability management<br>• Penetration testing<br>• Phishing and Security Awareness Training<br>• vCISO services | Managed Detection and Response<br>• 24x7 threat monitoring and containment<br>• Network, endpoint, log, and cloud security | eSentire Incident Response<br>• Digital forensics<br>• Incident response |
|---|:---:|:---:|:---:|
| 1. Identifying and classifying data | ✔ | | |
| 2. Asset inventory and device management | ✔ | | |
| 3. Controlling access to sensitive data and systems | ✔ | | |
| 4. Data encryption and data retention | ✔ | | |
| 5. ICS and industrial controls | ✔ | | |
| 6. Mobile devices | | ✔ | |
| 7. Backup and recovery | ✔ | | ✔ |
| 8. Application testing and maintenance | ✔ | | |
| 9. Detecting and stopping unauthorized activity | | ✔ | ✔ |
