Due to the nature of nylon and printed fabrics, special care must be taken throughout the decoration process.

B120 - ATC™ Everyday Reusable Cinch Pack

Printing Instructions for Nylon Fabrics

Due to the nature of nylon fabric, special care must be taken throughout the decoration process. Here are some tips to effectively decorate our performance products.

Garment temperature must not exceed 290°F or 143°C.
Exceeding this temperature will cause the fabric to shrink, become wavy or cause dye migration.

Dryer temperature and belt speeds must be changed accordingly for nylon fabric.

If flashing these garments, do not exceed 1-2 seconds. Anything longer may damage the fabric as stated above.

SCREEN PRINTING/HEAT TRANSFERS
• Garment temperature must not exceed 310°F or 154°C
• Although possible to do more, only one colour screen print is recommended

A test sample run is recommended, especially if you have a large order or if your printer does not specialize in printing on nylon fabrics.
