

## 28L Foundry Series Dual-Compartment Backpack CTB0000486

### Product Features:

- 1200D heavy-duty polyester
- Durable water repellent (DWR)
- PFAS free water repellent fabric treatment

Durable Water Repellent

Contour-fit shoulder straps with FastDry® sweat-wicking technology

Padded air mesh back panel with a webbing strap that can fit over dual trolley handle of wheeled bag

Large main compartment with dedicated tablet sleeve

Front zippered organization

Padded shoulder straps

### Available Colours and PMS Colours

Textile fabric colours are subject to dye lot variation and will not be exact match to print Pantone reference

BLACK  
Black C

CARHARTT  
BROWN  
463C

# CTB0000486 - Carhartt® 28L Foundry Series Dual-Compartment Backpack

## Bag Measurements

Dimensions	18"h x 12"w x 10"l
Volume	Approx. 1,709 cu. in./28L

## Decoration Area

Location	Size
Left Side Pocket	5"h x 2"w
Right Side Pocket	5"h x 2"w
Middle Front Pocket	4"h x 6"w
Top Front Pocket	3"h x 4"w

## Decoration Recommendations

Due to the nature of 100% polyester fabrics and water repellant coatings, special care must be taken throughout the decoration process. Here are some tips to effectively decorate our polyester products.

**Garment temperature must not exceed 320°F or 160°C.**

Exceeding this temperature will cause the fabric to shrink, become wavy or cause dye migration.

**Dryer temperature and belt speeds must be changed accordingly for polyester fabric.**

**If flashing these garments, do not exceed 1-2 seconds. Anything longer may damage the fabric as stated above.**

### EMBROIDERY

- For better results, Magnetic or Clamp Frames are recommended for stability and max decoration range
- Heavy weight fabrics may require a larger needle such as 80/12 or 90/14 Sharp Point

### SCREEN PRINTING

- These products require the use of poly inks that cure at a lower temperature, as well as grey or black bleed blockers. Please consult your ink supplier for more information.
- Bonding catalysts may be required for water resistant/waterproof coated fabrics.
- Polyester requires a longer cooling time than cotton. Avoid overlap of garments and screen-print/heat transfer until the garments are cooled. Failure to cool the fabric prior to stacking into a printer's fold may cause the fabric and applied ink to stick together.
- For best results, manual press or specialty equipment may be required

### HEAT TRANSFERS

- Low-cure adhesive and bleed blockers are required. Please consult with your transfer supplier for temperature and time recommendations specific to 100% polyester.
- Bonding catalysts may be required for water resistant/waterproof coated fabrics.
- For best results when using heat applied consumables to avoid a color or sheen change, it is recommended to use a protective foam application pad.

**A test sample run is recommended, especially if you have a large order or if your printer does not specialize in printing on polyester fabrics.**
