

# 2019 NOVEL CORONAVIRUS (COVID-19)

## Cleaning and Disinfection for Public Settings

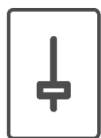

### What you should know

We have reviewed our cleaning and disinfecting procedures. While this is common practice for us, we are increasing the frequency.

### Cleaning and disinfection for the Coronavirus

Commonly used cleaners and disinfectants are effective against COVID-19. We are regularly cleaning and disinfecting:

- Treatment table & face cradle
- Countertops, door knobs, handrails, light switches, and toilet handle
- Payment terminal
- Chairs in the waiting area

### Additionally

Our restroom will be fully stocked with soap and clean towels. All therapists and staff are regularly and thoroughly washing their hands and arms. We have also removed magazines from the waiting area so you're not tempted to pick one up!
