

Training

Good visualization practices

Putting tips into practice to improve the level and quality of data storytelling

Visualization

- + History of the graphical visualization of data
- + Visualization rules and the credibility of information
- + A review of the most commonly used visual graphics
- + Different types of visual analyses
- + Visual indicators

Dashboards

- + Different types
- + Principles of information cascade
- + Typologies and their impact on design, maintenance and evolution
- + Principles of ergonomics applied to dashboards
- + Example of M.A.D by Wayne Eckerson

Duration: 1 day

Location: Online or in person (at your office or at agileDSS)

Prerequisites: Basic concepts of business intelligence (BI)

Participants: Minimum 4 people

Charles-Étienne Lavoie, your trainer, teaches dashboards methodology at the Sherbrooke University and is also a data storytelling specialist.
